

Tasks to do:

- ☐ Make Socials for Arteza
- ☐ Start Marketing or atleast build a set up/pathway
- ☐ Apply for paintings sale in Art magazines listed below
- ☐ Go through saves
 - ☐ Graaa
 - ☐ Dms
 - ☐ Substack
 - ☐ Pinterest
- ☐ Buy Coursera Free Trial + Figure out McKinsey
-

TOUCH DESIGNER

PERSONAL BRANDING

Things to study:

predictive coding (neuroscience), the free energy principle (neuroscience), epigenetic inheritance, quantum decoherence, the hard problem of consciousness, the fermi paradox, the anthropic principle, emergence theory, the dunbar number, neuroplastic critical periods, entropy and the arrow of time, narrative identity, opportunity cost,

- To make an app use kineto. Write a PRD (who the app is for, what the user flow should look like, features to include. Next take design inspo yourself or from dribbble, behance, UI land, Page Flows.
- More Gen Z men want to be parents than women. There is a growing gap between young women and men. The gender split between young men and women's personal choices has started to show up in family planning. 51% of young men aged 18 to 34 want to be parents, compared with 45% of women as per a 2024 study by the Pew Research Center. The growing schism in parenthood isn't surprising, as birth rates in the U.S. have dropped to an average of 1.6 births per woman. The declining birth rate is a sign of global societal progress, as incomes and education levels have risen. This has resulted in more intentional choices about parenthood and family planning. However, that doesn't change the evidence that more than half of young men want children, even as more women have expressed apprehension. A part of that apprehension could be that women, who are also a significant part of the workforce, still do most of the caregiving in American households. This is supported by the rise of young men who want to enforce traditional marital and family roles in their future households, an alarming King's College London and Ipsos study for International Women's Day emphasized. The Trump administration has also been pushing Americans to have more kids, and that's making some women rethink their stance on parenting.
- Everybody wants to be an engineer. Nobody wants to engineer anything. 750,000 graduates every year. Ask 90% to build something from scratch without a tutorial. They'll stare at you like you asked them to perform surgery. Four years of engineering. Not one original project. Just copied assignments, downloaded Github repos, and resumes that all say "Proficient in Java, Python, C++. Quick Learner." You're not an engineer. You're a template with a degree. India didn't produce coders. India introduced syntax memorisers. People who can write a for loop but can't tell you when to use one. People who've "done" machine learning but can't clean a CSV without a Youtube tutorial. An entire country reduced computer science, one of the most beautiful, creative disciplines ever created, to inverting binary trees for interview rounds. That's not engineering, that's exam prep with a VS Code skin. Then came bootcamps. "Learn to code in 90 days". Thousands paying 2 lakhs to build the same todo app, weather app, Netflix clone. Nobody learnt to think.

Everyone learnt to copy. And now? AI writes better code than all of them. Coding was never the skill. Thinking was. Which is something they never taught us.

- “The first step, especially for young people with energy and drive and talent, but not money, the first step to controlling your world is to control your culture. To model and demonstrate the kind of world you demand to live in. To write the books. Make the music. Shoot the films. Paint the art.” —Chuck Palahniuk, 2004-12-05
- Places to make music in — FL Studio, Cubase, Audacity, Strudel.
- Art magazines — Artforum, Frieze, ARTnews, Aperture. ArtReview, Whitehot magazine of contemporary art, Juxtapoz, BOMB magazine, HYPERALLERGIC, DesiArtMag, Tatler.
