

Things To Try:

1. Plastic detox
2. Neuroplasticity habit building using research papers

Jobs Boards/Side Hustles:

1. Toptal
2. WeWorkRemotely
3. Fiverr
4. Telus International
5. Arc.dev
6. A.team
7. Pull request
8. <https://www.cambly.com/en/tutorsignup/step/welcome>
- 9.

Companies to look at:

1. <https://altermag.com>
2. <https://altcarbon.com>
3. <https://amuselabs.com>
- 4.

Companies I like:

1. IBM
2. Goldman Sachs
3. JP Morgan Chase
4. ASML

Volunteering:

1. <https://www.catchafire.org/volunteer>
2. <https://taprootfoundation.org/taproot-plus>
3. <https://www.idealists.org/volunteermatch>
4. <https://app.parkerdewey.com/talent/655923/dashboard/opportunities>
5. <https://www.theforge.com/dashboard>

Coding:

1. <https://summerofcode.withgoogle.com>
2. Learn system design + oreilly building evolutionary architectures

Certification/Courses:

1. <https://www.capitalonecareers.com/search-jobs>
2. <https://www.hudsonrivertrading.com/careers>

Movies:

1. Love Exposure (2008)

Songs:

1. [Red Dragonfly - Cho Yongpil](#)
2. Ragas
- 3.

For Quick view:

1. Oreilly system design books

2. Resumes should tell stories. The bullet points should always
 - ★ begin with an action verb,
 - ★ what you did, why it was impactful, metrics, tools and technologies used

3.

Notes:

1. **How Databricks works:** Traditionally, companies always stored their data inside data warehouses and data lakes and needed two teams to manage both separately. In 2009, Matei Zaharia at UC Berkeley created Apache Spark. This technology helped by distributing data across thousands of computers at the same time as datasets. On top of Spark, ideally a lakehouse was built that combined the features of both a data lake and a data warehouse. This was open sourced as Delta Lake. Over the next decade as companies used this structure for data storage. Databricks was founded in 2013 by Spark's creators as a middle layer between this technology and the enterprises and companies using them. By 2022, with the boom in AI usage and the need to store the training data for thousands of models, Databrick was in a good position to make money. The run rate for databricks has gone from \$200 million in 2020 to \$5.4 billion (projected) in 2026 and they are set for an IPO in the near future.

Data Warehouse	Data Lake
Structured data (Docs, Forms, Sheets)	Unstructured data (Images, Videos)
Schema-on-write, fast for structured queries, higher cost	Schema-on-read, flexible, cheaper storage

2. Local → Dev → Staging (mock data) → Beta (early access) → Production
